CAREER OBJECTIVE

Cybersecurity professional with 9+ years in test automation, system deployment, and IT operations, now specializing in threat detection, log analysis, and incident response. Recently earned CompTIA Security+, CySA+, and PenTest+ certifications, with hands-on experience in SIEM (Splunk), vulnerability scanning (Nessus, ZAP), and scripting (Bash, PowerShell). Passionate about applying skills in incident triage and security operations to help eliminate cyber risk.

EDUCATION

- CompTIA **Security+** Certification (2024)
- CompTIA Cybersecurity Analyst+ (**CySA+**) Certification (2025)
- CompTIA **Pentest+** Certification (2025)
- Offensive Security Certified Professional (**OSCP**) (In Progress)
- Bachelor of Engineering in Electronics and Communications, Rajalakshmi Engineering College (2012)

CORE SKILLS

Threat Detection & Incident Response	Vulnerability Management	SIEM (Splunk)	MITRE ATT&CK
AD & IAM	Security (Firewalls, IDS/IPS)	Web App Security (OWASP Top 10)	Scripting (Bash, PowerShell, Python)
Security Operations	Malware Analysis	Risk Mitigation	Security Governance& Compliance

CYBERSECURITY PROJECTS & LABS

Hack The Box — Holmes CTF 2025 (Capture The Flag Competition)

- Completed HTB Holmes 2025 CTF with hands-on offensive/defensive cybersecurity challenges.
- Performed forensic investigations, script reverse engineering, and attacker activity mapping.
- Utilized Zimmerman, Nmap, and Metasploit for threat detection and incident response exercises.

Security Operations & Threat Detection Labs [CompTIA CySA+ | Security+]

- Threat Detection & Intelligence:** Used SIEM (Splunk), MITRE ATT&CK, and honeypots for log analysis and threat identification, simulating real-world scenarios in lab environments.
- Vulnerability Management:** Scanned and reported system weaknesses using Nessus, ZAP, Metasploit, and Burp Suite.
- Incident Response & Log Analysis:** Applied NIST/CISA frameworks; investigated incidents using Wireshark, Tcpdump, and PowerShell event log scripts.
- Attack Simulation & Scripting:** Simulated brute-force, reverse shell, and command injection attacks; automated recon and analysis tasks using Bash and PowerShell.

Penetration Testing [CompTIA PenTest+ (PT0-003)]

- Reconnaissance & Scanning:** Performed passive and active reconnaissance with Nmap, FOCA, OpenVAS, and packet crafting tools.

- **Exploitation & Privilege Escalation:** Conducted SQL injection, Kerberoasting, pass-the-hash, and remote shell exploits using Metasploit, Hydra, and Rubeus.
- **Web & Network Attacks:** Executed XSS, command injection, and on-path attacks (e.g., ARP poisoning, SSL stripping).
- **Post-Exploitation & Reporting:** Maintained persistence, conducted AD enumeration with BloodHound, and documented findings in structured penetration test reports.

WORK HISTORY

Career Break

Relocation and Career Transition (Australia and Muscat)

May 2022 – Present

- Took a career break due to relocation to Australia and Muscat, during which I upskilled and transitioned into cybersecurity by earning CompTIA Security+, CySA+, and PenTest+ certifications to enhance my expertise and readiness for a cybersecurity career.

EPAM Systems

Senior Software Test Automation Engineer

Chennai, India, 11/2021 - 05/2022

- Developed, improvised, and maintained automation frameworks using Java, Selenium and Cypress, incorporating security-focused test scenarios such as input validation, session handling, and error message exposure.
- Participated in Agile development cycles and collaborated closely with penetration testers, DevOps, and developers from the early stages of product development to integrate security testing into CI/CD workflows.
- Applied secure coding standards and best practices while developing test scripts; conducted peer code reviews and identified security vulnerabilities during test script development.
- Performed test result analysis, defect triaging, and tracking of security and functional issues using defect management tools like Jira, ensuring issues are prioritized and resolved efficiently.

Cognizant Technologies Solutions

Associate Technical Lead

Chennai, India, 11/2016 - 11/2021

- Designed and executed automated test cases across diverse browsers and hardware configurations, ensuring secure and consistent application behavior across environments.
- Reverse-engineered and customized automation frameworks to align with security requirements and project-specific workflows, improving detection of security regressions.
- Planned and performed functional, regression, and API testing using Eclipse, Git, Jenkins and Azure DevOps within Agile and CI/CD pipelines, embedding security best practices.

Tata Consultancy Services

System Engineer

Chennai, India, 08/2012 - 10/2016

- Automated system administration tasks for the Windows environment using scripting (VBScript/PowerShell) to reduce manual effort and enhance security hygiene (e.g., service restarts, storage cleanup).
- Responded to and resolved high-priority end-user tickets within SLA as part of the L3 End User Computing team, including patch management, KB article creation, and root cause analysis.
- Built and deployed custom Windows OS images pre-configured with required patches, drivers, and packaged applications using automation scripts and deployed them using Microsoft SCCM.
